

NO-SEW CAT BED

Step 1: Materials

I used 1 yard each of two different prints of fleece per bed. One yard will actually make two of the size I have, but you may want to make yours bigger or smaller!

(This bed looks like it is stuffed, but it works better for us if it isn't stuffed – just two pieces of fleece tied together. They also do not need to be this big – inside size without the fringe maybe 12" x 12" or 12" x 15").

Step 2: Cut Shape

Decide what size bed you want and add at least 8" all the way around. This is because we are going to cut 4" strips to tie together.

It's easiest if you cut the two layers at the same time. That way they'll be sure to line up perfectly!

First I cut the selvage edge from the fleece - it has the test printing on it. Then I cut the fleece to half its width.

Step 3: Cut Fringe

Next I measured 4" in from each corner and laid a ruler across this line.

I cut a slit every inch until it reached the ruler. This was much easier than drawing a bunch of lines first. (See picture 2)

You will end up cutting out the corner pieces.

Step 4: Knot

Starting at one corner. Tie the two sides together strip by strip. Use a double knot to make sure it doesn't come undone.

Tie together all of the strips.

You're finished! All that's left is to introduce the pet to his new bed. Hope you both enjoy!
